#### Drug Treatment Studies

**RVT-101:** This is a Phase 2, double-blind, randomized, placebo-controlled crossover study evaluating the effect of RVT-101 on gait and balance in people with Alzheimer's disease, Lewy body dementia, or Parkinson's disease dementia ages 55 to 89. Contact Christine Minderovic at [cmindero@med.umich.edu](mailto:cmindero@med.umich.edu) or 734-998-8420.

#### Brain Stimulation Studies

**Promoting adaptive neuroplasticity in mild cognitive impairment (Merit):** Examining the benefits of two types of treatments for memory impairment – cognitive rehabilitation and electrical brain stimulation. Study is looking for adults with mild cognitive impairment over the age of 50. Contact Oliver Calhoun at [occ@med.umich.edu](mailto:occ@med.umich.edu) or 734-764-7282.

#### Neuroimaging and Biomarker Studies

**Examination of the earliest symptoms and biomarkers of FTLD MAPT carriers:** Investigating the earliest clinical features of frontotemporal dementia in an effort to improve early detection of the disease. Study is looking for adults age 18 and older with a family member who has frontotemporal dementia. Contact Stephen Campbell at [stepcamp@med.umich.edu](mailto:stepcamp@med.umich.edu) or 734-763-2361.

**Lewy Body Dementia Biomarkers:** Investigating new brain imaging approaches that investigators hope will identify protein accumulations in the brain of individual patients with PD-related dementia. This study is looking for adults age 55 and older with Parkinson's disease dementia (PDD), Dementia with Lewy Bodies (DLB), or Alzheimer's disease with at least one symptom of DLB. Contact Christine Minderovic at [cmindero@med.umich.edu](mailto:cmindero@med.umich.edu) or 734-998-8420.

**Risk Evaluation and Education of Alzheimer's Disease – the Study of Communicating Amyloid Neuroimaging (REVEAL-SCAN):** The purpose of this study is to learn about the best ways to communicate educational information about amyloid imaging brain scans and risk information about the chance of developing AD. Study is enrolling cognitively normal adults ages 65 to 80, have/had at least one first-degree relative (i.e., parent or siblings) with Alzheimer's disease. Contact Lan Le at [revealstudy@umich.edu](mailto:revealstudy@umich.edu) or 734-615-2422.

## Lifestyle Intervention Studies

**ACT-OUT:** This study takes place at Wayne State University and is investigating participation in activities and places outside the home of older adults with dementia to examine what people do and where they participate in everyday life as they age. This study involves completing a survey and answering interview questions. The study is looking for adults over the age of 55 who are living with dementia. Contact Susan Lawrence, PhD at susan.lawrence2@wayne.edu or 313-577-1217.

**Alzheimer's Disease Neuroimaging Initiative 3 (ADNI 3):** The purpose of this observational study is to determine the relationships among clinical, cognitive, imaging, genetic, and biomarker characteristics of the entire spectrum of Alzheimer's disease as it progresses from a preclinical stage to very mild symptoms to mild cognitive impairment (MCI) to dementia. Study is looking for adults age 55-90 with normal cognition, MCI, or mild AD. Contact Jaimie Ziolkowski at jziolkow@med.umich.edu or 734-647-7760.

**Decision Making for Cardiovascular Therapy in Adults with Mild Cognitive Impairment (MCI DeM):** Investigating what adults with cognitive impairment and the friends or family involved in medical care think about health risks and preferences for medical treatment if they were to become seriously ill because of a heart attack or stroke. Study is looking for adults age 65 or older who have a diagnosis of MCI and are fluent in English. Contact Bailey Green at greenba@med.umich.edu or 734-647-3971.

**Enhancing Safe Mobility among Older Drivers:** Investigating how older drivers might change their driving behavior over time and what influences any changes that might occur. Study is looking for healthy adults age 65 or older. Contact Jennifer Zakrajsek at jzak@umich.edu or 734-615-4740.

**Mind 'n MOTION:** Investigating the use of Mindfulness-Based Stress Reduction and multifactorial balance control training as a method for reducing fall risk. Study is looking for adults with mild cognitive impairment age 55 and older. Contact Laura Rice-Oeschger at leric@med.umich.edu or 734-936-8332.

**Subjective Cognitive Impairment – A Sign of Incipient Alzheimer's Disease?** Longitudinal study investigating functional and structural brain changes in healthy older adults with and without cognitive complaints. Study is looking for adults age 60 or older with worrisome memory complaints or a diagnosis of mild cognitive impairment (MCI). Contact the Wayne State University Connect Lab at connectlab@wayne.edu or 313-664-2670.

**University of Michigan Memory and Aging Project (UM-MAP):** Investigating changes in cognitive functioning over time to learn more about normal aging and neurodegenerative diseases. Study is looking for adults with or without cognitive changes over the age of 55. Contact Stephen Campbell at stepcamp@med.umich.edu or 734-763-2361.

For a complete list of studies and for more information, contact Stephen Campbell at 734-763-2361 or visit our website, [alzheimers.med.umich.edu](http://alzheimers.med.umich.edu)
