

Are you a family or friend caregiver for a military Veteran living with dementia? The **WeCareAdvisor™ Study** may be right for you!

We are currently seeking caregivers to test the WeCareAdvisor, a web-based tool that aims to help users to learn more about and manage behavioral and psychological symptoms of dementia like wandering, repeated questioning, anger, depression or apathy.

You may be eligible to participate if you are:

- 21 years of age or older
- The **primary in-home** caregiver for a military Veteran living with dementia
- Currently managing difficult behaviors related to dementia
- Have access to and are comfortable using technology like a computer or tablet

Volunteers will be asked to participate in an approximately 2-hour telephone and video teleconference interview and will be given an orientation to the WeCareAdvisor tool.

Volunteers will then be asked to use the WeCareAdvisor tool in their homes for 1 month. Following this, a telephone follow-up interview lasting approximately 2 hours will be conducted. Participants will be compensated for their time.

To see if you are eligible and learn more about the study, please contact:
