

WAYNE STATE
UNIVERSITY

Seeking Volunteers for Memory Research

Investigator

Voyko Kavcic, PhD
Institute of Gerontology
Wayne State University

Wayne State University is conducting a study to identify potential biomarkers for the early detection of cognitive decline and Alzheimer's disease.

The ELECTRA study is seeking African-American participants both male and female, ages 65 and over.

**In-person visits are on hold due to COVID-19.
Now recruiting for phone-only screening visits!**

Volunteers will receive compensation for study participation.

When in-person visits resume, they will involve:

- Brief neurological assessments
- Tests of memory and thinking
- Electroencephalogram (EEG): recording of tiny electrical signals from the top of the head.
