

UNIVERSITY OF MICHIGAN SEEKING VOLUNTEERS FOR A RESEARCH STUDY

The University of Michigan is doing a study using a program developed by the National Institutes of Health on the iPad to better detect signs of memory and thinking difficulties that may predict the development of additional problems as we get older.

We are seeking volunteers age 65 years and over to volunteer for the study.

Participation includes:

- Yearly University of Michigan-Memory and Aging Project (UM-MAP) visit that includes a neurological and physical exam and memory screening.
- The ARMADA Project visit includes using an iPad for memory screening. Participants need to come back once a year.

Participants will receive a payment in the form of a check/gift card for the time and effort they gave for study participation. If you are interested in learning more, call the study coordinator, Yonatan Kahsay, at (734)-936-5985.

Research Investigators:

Bruno Giordani, Ph.D., Department of Psychology, University of Michigan
Hiroko Dodge, Ph.D., Department of Neurology, University of Michigan
Laura Zahodne, Ph.D., Department of Psychology, University of Michigan
