Research Study

We are seeking volunteers who have received a diagnosis of Lewy Body Dementia (LBD) for a research study that uses cognitive rehabilitation and non-invasive brain stimulation influence LBD symptoms (HUM00184296).

You may be eligible if you:

- Are between the ages of 50 and 90
- English speaking (as the preferred language)
- Have an official diagnosis of Lewy Body Dementia (LBD) and are on a stable dose of cholinesterase inhibitors (i.e. at least 4 weeks)
- Are MRI compatible and are comfortable undergoing fMRI and PET imaging

Study Name: Cholinergic functions and modulation of the cingulo-opercular alertness network in LBD
Principal Investigator: Benjamin M. Hampstead, PH.D., ABPP/CN
Please contact the study team to learn more information.
Phone: 734-936-7360
