Have you been diagnosed with Lewy Body Dementia?  
We need your help!

We are seeking volunteers that have been diagnosed with Lewy Body Dementia (LBD) to participate in a study that uses cognitive rehabilitation and non-invasive brain stimulation to influence LBD symptoms.

**Who can participate?**

- Are between the ages of 50 and 90
- Fluent in English
- Have an official diagnosis of Lewy Body Dementia (LBD) and are on a stable dose of cholinesterase inhibitors (i.e. at least 4 weeks)
- Are MRI compatible and are comfortable undergoing fMRI and PET imaging

**For more information and to see if you qualify, contact us!**
