Research study on older adults’ technology use
Researchers at Michigan State University are looking for individuals who are 50 or older (main participants) and, if available, their household partners (study partners) to participate in an online study. Main participants can participate independently, without study partners.

Specifically, we are seeking main participants who are diagnosed with either

- mild cognitive impairment or
- recently diagnosed dementia (e.g., early stage of Alzheimer’s disease, Lewy Body dementia or mixed dementia (e.g., Alzheimer’s disease and vascular cognitive impairment).

Participants in this study should have access to broadband ("stable") Internet with a camera and sound available. Participants in this study should be capable of deciding on their own to participate or not to participate in this study.

If study partners, such as a spouse, adult child, sibling, wish to participate, they do not have to be 50 or older, but they must live in the same household as the main participant and be 18 years of age or older.

If you wish to participate in the study, you can take the screening survey. Use your CAMERA app on your phone to SCAN THIS QR CODE below to fill out the screening survey if you are interested!
