University of Michigan

Memory & Aging Project

HUM00000382

The University of Michigan Memory and Aging Project (UM-MAP) investigates changes related to memory and thinking over time so that researchers can learn more about normal aging and neurodegenerative diseases. Participants in UM-MAP can be seen in both our Ann Arbor and Detroit locations. There is modest compensation for participation. All participants must have a family member or close friend as their study partner to accompany them to visits.

Who can participate?

Adults over the age of 55
Healthy older adults with or without memory complaints
Adults with a diagnosis of mild cognitive impairment, Alzheimer’s disease or a related dementia

What to expect?

A physical exam
A neurological exam
History and symptom survey
Evaluation of memory and thinking
Magnetic Resonance Imaging (MRI)
Blood draw and/or saliva sample collection

For more information and to join the study, contact Holly Bunker at hlbunker@med.umich.edu or 734-615-5319.
